

On the Subject of Complex Keypads

As if having four buttons wasn't enough.

See Appendix A for indicator identification reference.

See Appendix B for battery identification reference.

See Appendix C for port identification reference.

- Only one row below has all nine of the symbols that appear on the keypad.
- Follow these rules in the order they are listed. Perform the first action that applies:

1. If there are more than 2 batteries and a parallel port present on the bomb, disregard the chart and press the keypads as they appear on the module, going left to right, top to bottom.
2. Otherwise, if a DVI-D port and a lit indicator labeled BOB are present on the bomb, the keypads must be pressed in the order they appear in the chart going right to left.
3. If none of the above apply, the keypads must be pressed in the order they appear in the chart going left to right.
